**Question 10.5.3.5:** The first term of an AP is 5, the last term is 45 and the sum is 400. Find the number of terms and the common difference.

**solution:**

Given AP is 5, ..., 45.

$x(0)$	5	1st term
$x(n)$	45	$(n+1)$ th term
$y(n)$	400	sum of $(n+1)$ terms
$n+1$	?	no. of terms
$d$	?	common difference

TABLE 0  
PARAMETERS

$$x(n) = x(0) + nd$$

$$40 = nd$$

$$y(n) = \frac{n+1}{2} [2x(0) + nd]$$

$$\Rightarrow n = 15$$

$$\Rightarrow d = \frac{8}{3}$$

(1)

(2)

(3)

by substituting equation (2) in the equation (1), we get the equation (3).

z transform of  $x(n), y(n)$  are  $X(z), Y(z)$

$$X(z) = \frac{7}{3(1-z^{-1})} + \frac{8}{3(1-z^{-1})^2}$$

$$Y(z) = \frac{7}{3(1-z^{-1})^2} + \frac{8}{3(1-z^{-1})^3}$$
